

[illegible]

Heatmap showing the distribution of 16 different types of errors across 16 different models. The models are grouped into three categories: RP (Reproduction Probability), MLN (Machine Learning Network), and a third group. The errors are color-coded: blue for 'Error Type 1', red for 'Error Type 2', and grey for 'Error Type 3'. The heatmap shows that RP models generally have higher error rates for 'Error Type 1' and 'Error Type 2' compared to MLN models, which show higher error rates for 'Error Type 3'.
